

VIVID Help Generator

VIVID Help:

- Fast, Automatic Help Generation From Driver Type Library
- Help Integrates Seamlessly With End-User Content Environments
- Optimized For IVI-COM Driver Development
- Customizable XML, XSL Templates Support Your Corporate Branding
- Includes Complete Source Content For Inherent Interface Help

Overview

VIVID Help quickly organizes and automates your help generation tasks, producing user-friendly Microsoft HTML Help systems that are useable in all popular development environments.

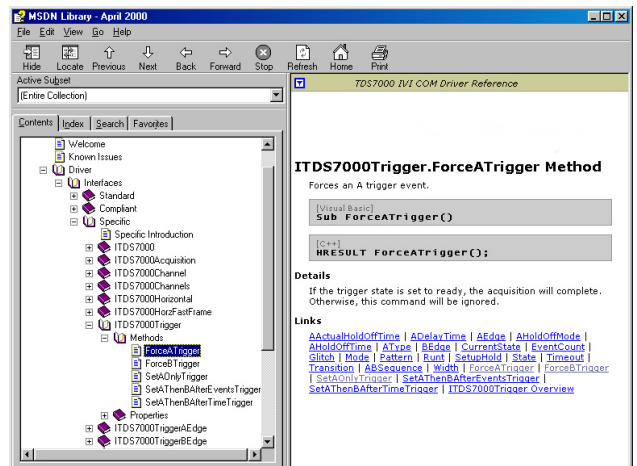

Optimized for Driver Help

Unlike general-purpose help authoring tools that must be manually configured for driver help, VIVID Help is highly optimized for instrument drivers. Starting with predefined XML and XSL templates that define your style and branding, VIVID Help automatically generates a help skeleton, complete with topics, links, table of contents and index – saving you from the tedious work of defining hundreds of topics and hyperlinks. You simply add your instrument-specific help content, and then generate an output help system ready for delivery.

Full Featured Help

VIVID Help creates full-featured help systems like the example shown below. Full-featured help systems make your drivers easier to use because

they integrate seamlessly into popular end-user development environments like Visual Studio and LabVIEW. This tight integration provides users with instant, context-sensitive access to driver information, improving end-user satisfaction and productivity.
